## College of Engineering

### Course Title: Reliability Engineering Fall 2018

**Course:** SIE 408/508

**Instructor:** Allan T. Mense, Ph.D., PE, CRE  
Systems and Industrial Engineering Department  
University of Arizona

**Office:** Engineering Building

**Office hour:**

**Phone Number:** (520) 907-7786 **E-mail:** atmense@email.arizona.edu

**GTA:** Seunghan Lee

**Office:** engineering

**Office hour:** TBD

**E-mail:** shlee17@email.arizona.edu

**Text:** Tobias, P.A., Trindade, D.C. *Applied Reliability, 3<sup>rd</sup> Edition*, CRC Press, Inc., 2012  
(ISBN 9781584884668v)

**Software:** Synthesis Minitab 18 (Licenses are available, free to use in class); MS Excel

#### Course Description and Goals:

This is a three-credit course configured for well-qualified seniors, graduate students, and engineering professionals and practitioners. This is a moderately advanced text and will be supplemented with material on many everyday reliability engineering problems e.g. root cause analysis. The course will make use of Minitab™ software. The scope of this course includes: (1) descriptive statistics, (2) reliability concepts, (3) statistical methods for estimating the failure distribution of a product, (4) basics of physics of failure analyses (5) systems reliability analyses, (6) Bayesian reliability estimates.

After successful completion of the course the students will be able to analyze data related to reliability questions and use the analytical results to predict the reliability of simple and complex systems. This course will provide an introduction to probability for continuous and discrete random variables, statistical failure time models, estimation of model parameters, model comparison and prediction of future failures. Students will practice application of the theoretical techniques with data sets from different engineering disciplines using the commercial software provided in this class.

**Graduate-level requirements include 1) additional homework problems, 2) a term project including computer program that focuses on real-world implementations of the course material and/or original theoretical developments in the form of a technical paper. Project topics must be approved by the instructor.**

**Prerequisite:**

For undergraduate students: SIE 305 or equivalent; For graduate students: SIE 430/530.

**Topics to be covered:**

- Basic concepts in Reliability Engineering
- Statistical reliability models
- System reliability analysis
- Life time data analysis & model parameter estimation
- Bayesian reliability analyses

**Contribution to Professional Component/Learning Outcomes:**

1. Understand and gain the ability to apply concepts and methods of reliability analysis to failure data from different engineering disciplines.
2. Understand and be able to develop probability distribution models (exponential, Weibull, etc.) for failure time analysis.
3. Understand various statistical methods used in reliability analysis.
4. Acquire ability to appropriately apply statistical methods to the prediction/allocation of reliability and failure rates for technological systems and their components.
5. Acquire ability to model system reliability.
6. Acquire ability to perform root cause, apply reliability growth models, and understand reliability vocabulary.

**Proctor Information:**

This course will have proctored exams for distance students. It is the student’s responsibility to locate a proctor and report this information to the distance education department.

**Grading (different criteria will be used for Under Grad and Grad students):**

SIE 408		SIE 508	
Homework	55%	Homework	40%
Midterm Test	15%	Midterm Test	15%
Final Exam	30%	Final Exam	30%
<b>Total</b>	<b>100%</b>	Research Project	15%
		<b>Total</b>	<b>100%</b>

It is expected that grading will be based on a percentage of the total points possible with the following minimums required for each grade: **A = 90%, B = 80%, C = 70%, and D = 60%**. I reserve the right to give extracredit problems for both homework and exams.

Homework will be assigned approximately one week before it is due. **NO LATE HOMEWORK WILL BE ACCEPTED unless arrangement has been made with instructor or GTA.** If you cannot attend class, make sure your homework is e-mailed to the GTA or delivered to my office (TBD Engineering Building) before class on the day it is due. Homework not turned in on time will be graded as zero, so please turn in what you have completed even if you have not fully completed an assignment.

## **Research Projects (RP) – Individual Project (508)**

### **Research Topics: Some Suggestions**

- Bayesian Reliability
- Will assign tasks in class
- **Other: You propose it!**

### **Deliverables:**

- RP1: Topic proposal
- RP2: Initial list and summary of literature search
- RP3: Continuation of literature search
- RP4: Refinement of literature search
- RP5: Future work
- RP6: Final report
