SIE 550 (Linear) Systems Theory: Spring 2021

Course Instructor, Lectures and Course Website

Instructor: Dr. Roberto Furfaro, robertof@email.arizona.edu
1. Campus Office: ENGR305, 520-621-2525
2. Cell: 520-312-7440 (texting is preferred)
Office Hours: Tue-Th 5:30pm-6:30pm (zoom personal room) or by appointment.
Teaching Assistant: Mr. Enrico Schiassi, eschiassi@email.arizona.edu,
Mr. Mario De Florio, mariodf@email.arizona.edu
Mr. Luca Ghilardi, lucaghilardi@email.arizona.edu
(OH: for TAs will be announced later)
Lectures: Tue-Th, 4:00pm - 5:15pm (zoom meetings)
Course content on D2L: www.d2l.arizona.edu

Course Description
This course is a core course for graduate students at the SIE department. Although the title is “Linear Systems Theory”, the course will cover both linear and non-linear systems under a unified framework. The goal of the course is to give the students a deep understanding of the behavior of dynamical systems as well as means to analyze autonomous and non-autonomous systems employing basic and advanced mathematical techniques. The material covered in this course spans from representation and analysis of dynamical systems, Lyapunov stability theory, controllability and observability of linear systems as well as design techniques for dynamical system stabilization.

Schedule and Topics

Week 0: Jan 14
Topic: Introduction

Week 1: Jan 19 -21
Topic: Mathematical Background: Fundamentals of linear algebra
  1. Vector spaces
  2. Linear Operators
  3. Eigenvalues and Eigenvectors
  4. Diagonal Forms and Jordan Forms
  5. Special Linear Operators: Symmetric and Normal/Orthogonal Operators

Week 2: Jan 26 -28
Topic: Linear and Non-Linear Dynamical Systems
  1. General Dynamical Models
  2. Examples of linear and non-linear models
  3. Linear and non-linear phenomena
Week 3: Feb 2 – Feb 4
*Topic: Solutions of Linear Differential Equations*
1. Solution of Systems of linear differential Equations
2. Laplace transform and the concept of transfer function
3. Duality
*Wed Feb 3 - HW#1 due*

Week 4: Feb 9 – 11
*Topic: Stability Concepts I*
1. Stability of Equilibrium Points and Linearization
2. Lyapunov Stability: General Concepts
3. Lyapunov Stability for Linear Systems

Week 5: Feb 16-18
*Topic: Stability Concepts II*
1. Lyapunov Stability for Non-linear Systems and Linearization
2. Exponential Stability and Region of Attraction
3. Converse Lyapunov Functions and Non-Autonomous Systems
*Wed Feb 17 – HW#2 Due*

Week 6: Mar 2-4
*Topic: Stability Concepts III*
1. Perturbed Systems
2. BIBO Stability
*Wed Mar 1 – HW#3 Due*

Week SB (Mar 6- Mar 14): Spring Recess

Week 7: Mar 16-Feb 18
*Topic: Finite Time Stability*
1. Finite Time Stability: Basic Concept and Definitions
2. Finite Time Stability Conditions for Autonomous and Non-Autonomous Systems

Week RW (Review): Mar 23-25
*Topic: Review and Mid-Term Exam*
*Wed Mar 24 - HW#4 Due*
*Tue Mar 23 - Midterm Review*
*Th Mar 25 - Midterm Exam (Take-home)*

Week 8: Mar 30- April 1
*Topic: Controllability*
1. General Conditions
2. Controllability Canonical Forms
3. Time Invariant Systems
4. Output and Trajectory Controllability
5. Controllability and Stability for General Systems

Week 9: April 6-8
Topic: Observability
1. General Conditions
2. Observability Canonical Forms
3. Time Invariant Systems

Wed April 5 - HW# 5 due

Week 10: Apr 13-15
Topic: Canonical Forms
1. Controllability Canonical Forms
2. Observability Canonical Forms
3. Examples

Week 11: Apr 20-22
Topic: Systems Design and Estimation I: Linear Methods
1. Stabilization: Basic Concepts and Linearization
2. Linear Systems Design: Eigenvalues placements
3. Linear Systems Observers
4. Controller Observer Separation Theorem
5. Examples

Wed Apr 21 – HW#6 due

Week 12: Apr 27-29
Topic: Systems Design and Estimation II: Linear Methods
1. Design and Estimation examples via MATLAB
2. Linear Quadratic Regulator

Week 1: May 4
Topic: Systems Design and Estimation III: non-linear methods
1. Lyapunov-based stabilization
2. Robust stabilization and sliding control

Wed May 5 – HW#7 due

Final Exam: May 10, 2021 (Take-home)
Grading
A regular grade (A, B, C, D, E) will be assigned. The grade will be established as a function of the class performance (curve). Each student will receive a numerical value according to his/her performance on the following items:

- Midterm Exam: 30%
- Final Exam: 40%
- Homework: 30%

Course Objectives
At the end of the course, the students are expected to be able to:

1. Analyzing of Linear and Non-Linear Dynamical Systems
2. Applying of the Lyapunov Stability Theory to Dynamical Systems
3. Understanding if a System is Controllable and Observable
4. Applying a Variety of Design Methodologies to Stabilize Dynamical Systems

Semester Assignments, Midterm and Final Examination
During the semester, students will be required to submit approximately 7 (seven) homeworks with bi-weekly frequency. Homeworks will be a combination of theoretical analysis and limited computer simulation via MATLAB. There will be one mid-term exam and one comprehensive final exam. Considering the pandemic instructions on both exams format will be announced later. Make-up exams for a valid excuse must be arranged at least 1 week before the scheduled exam date. Emergency situation should be communicated to the instructor as soon as possible to arrange for an alternative schedule. Without prior consent, there will be no make-up exams.

Class Attendance, Participation and General Ethical Guidelines
The students are expected to regularly attend the lectures. If lectures are missed, the student should make sure to get up-to-date with the course material by reviewing the zoom recorded lectures and the material posted on the D2L course website. Students and faculty each have a responsibility for maintaining an appropriate learning environment. Those who fail to adhere to such behavioral standards may be subject to discipline. Active participation during classes (e.g. answering questions when asked by the instructor, show interest and motivation for the subject) is encouraged and it may be taken into account when establishing the final grade. While collaboration and discussion between students during homework is encouraged, plagiarism is not tolerated and may be subjected to disciplinary actions.
Textbooks

Instructor class notes and relevant material (the instructor will make them available through the D2L course website at d2l.arizona.edu)

Software
MATLAB (full version available for download to UA students)

Zoom Lectures

Lectures will be delivered via zoom – access is granted via D2L portal. Here you have the zoom invitation:

Roberto Furfaro is inviting you to a scheduled Zoom meeting.

This meeting was created in a non-BAA environment and is not intended for the discussion of healthcare, health education, or health data research.

Topic: SIE 550 SP21 001 025 110 210 410
Time: Jan 14, 2021 04:00 PM Arizona
   Every week on Tue, Thu, until May 4, 2021, 32 occurrence(s)
